LEARNING

3 ways to infuse diversity, equity, and inclusion principles into your DEI compliance training
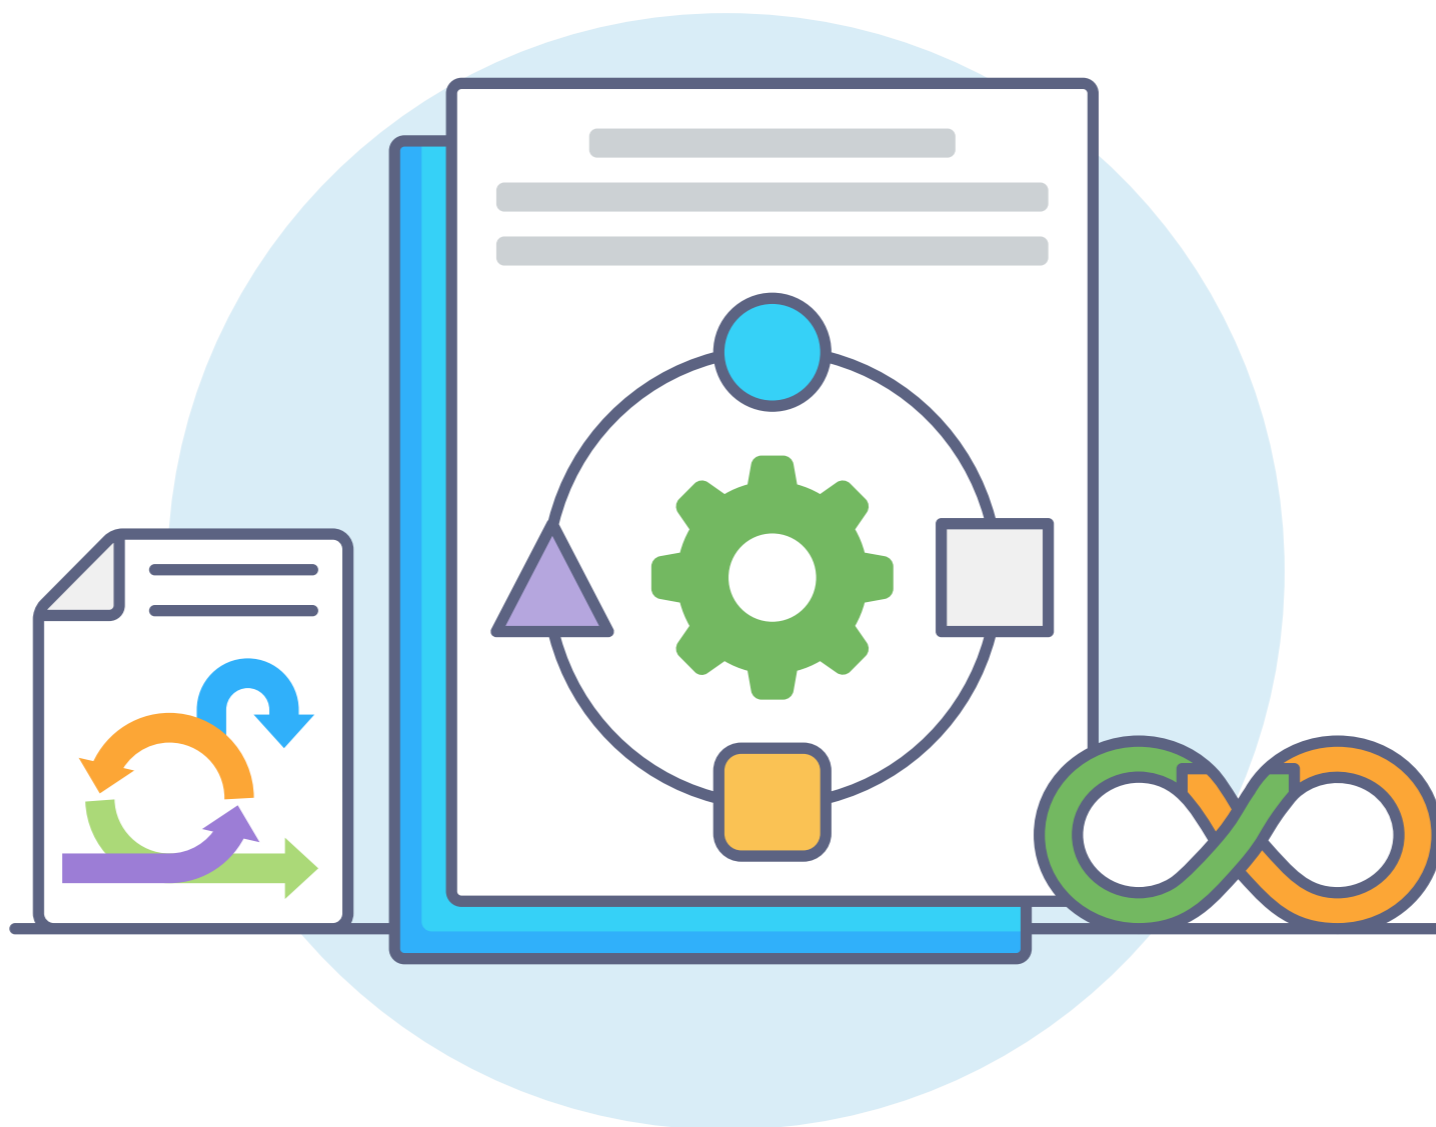

1

Fully responsive design

Problem:

According to the Web Content Accessibility Guidelines (WCAGs), you need to be able to display content in any orientation. Wheelchair users with tablets in a fixed position won't be able to rotate their devices to accommodate your DEI training.

Solution:

With a fully responsive authoring tool, your content will be resized and repositioned as needed—demonstrating your practical commitment to the inclusivity that DEI courses are all about!

2

Custom visual themes

Problem:

If your DEI courses rely on color combinations that some people can't easily differentiate, your learners might raise an eyebrow at how seriously your organization takes its own inclusivity stance.
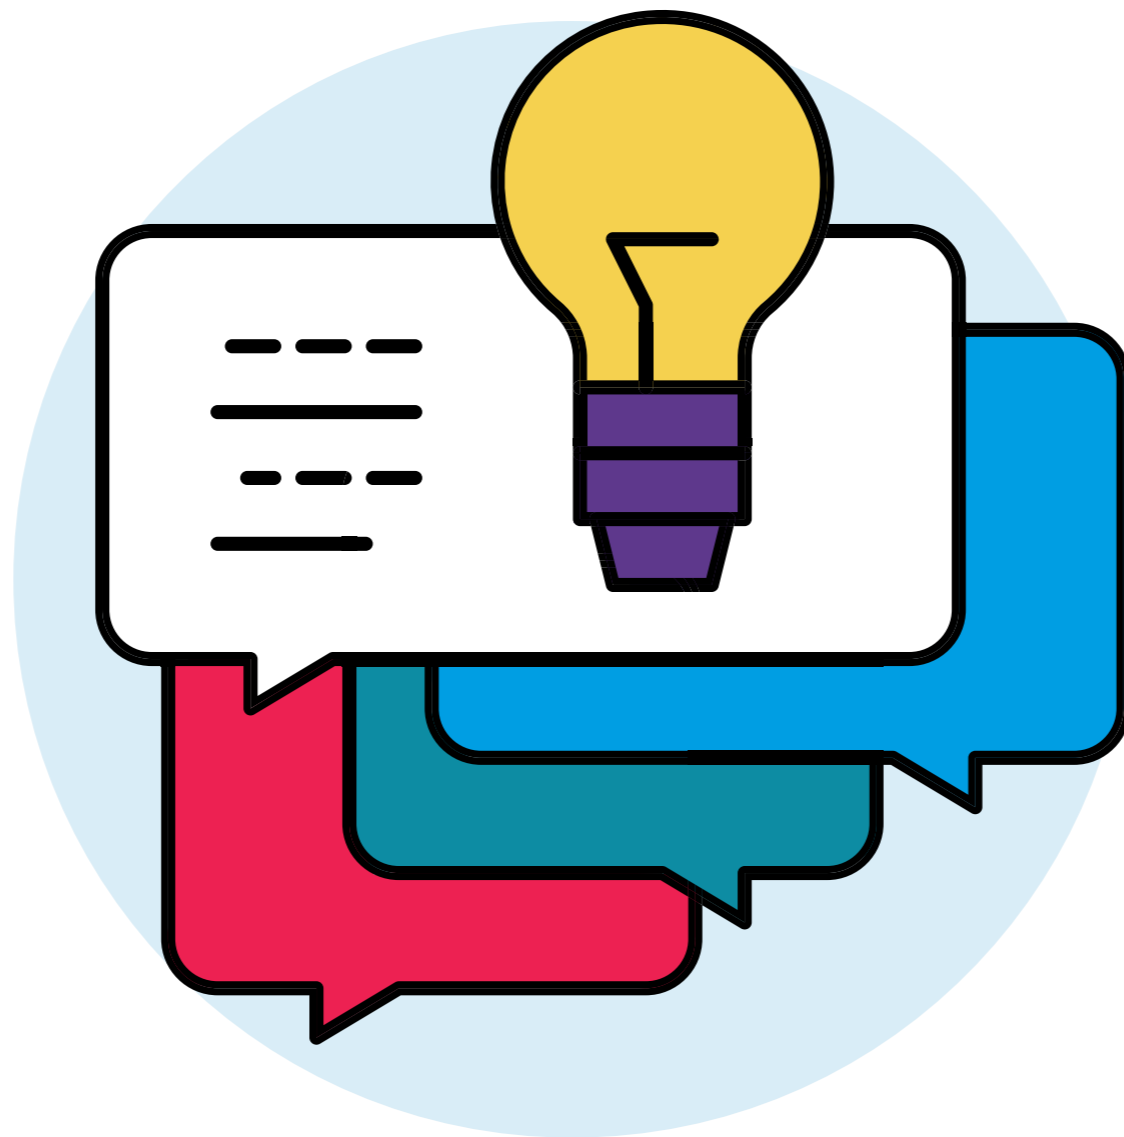

Solution:

Custom visual themes can resolve this problem by automatically applying your carefully chosen colors and contrasts across all your content, leveling the visual playing field for every learner.

3

Multilingual support

Problem:

Your DEI training may talk a good game about diversity—but if it's only talking in English, you're missing an opportunity to accommodate your organization's diverse cultures and backgrounds!

Solution:

With the help of multilingual support, your learners will be able to experience your DEI content in the language they prefer, demonstrating that your commitment to diversity doesn't end with the hiring process.
